EDUCATION

Purdue University

West Lafayette, IN

B.Sc. in Computer Science, GPA: 3.5

August 2023 – December 2026

- **Relevant Coursework:** Data Mining and Machine Learning, Introduction to AI, Analysis of Algorithms, Data Structures and Algorithms, Systems Programming

EXPERIENCE

Navyug Infosolutions

Noida, India

Software Engineering Intern

June 2026 – Present

- Built a patent-pending, end-to-end synthetic data pipeline for scaffolding inspection, generating labeled scenes and simulating sensor scans to detect structural changes; listed as an inventor on the pending patent
- Visited one of India's top ten refineries twice to study the scaffold erection process and coordinate with an outside vendor running 3D scans onsite, then used those findings to scope requirements for a change-detection system
- On a locked benchmark of 434 components, the pipeline reached 0.88 precision, 0.88 recall, and 0.88 F1, correctly recovering 7 of 8 real structural changes
- Set up an on-site camera and OCR system at a JSW steel plant to track plates across the factory floor, engineering around real constraints like lighting, occlusion, and camera handoffs
- Piloted the change-detection system on-site at the refinery, moving it toward production deployment to replace manual scaffold-inspection walkthroughs and give engineers faster, earlier visibility into structural changes

The Data Mine: Johnson & Johnson

West Lafayette, IN

Undergraduate AI Developer

August 2025 – May 2026

- Built a spec-driven data pipeline for oncology clinical trial data that matched reference outputs exactly across 6 tables and 10M+ cells, working closely with statisticians to validate assumptions
- Modeled patient outcomes across treatment regimens using Cox Proportional Hazards and LASSO survival models in Python, and presented results to clinical stakeholders

JMHC: Center for Applied AI & Philanthropy

West Lafayette, IN

AI Research Intern (part-time, ongoing)

February 2024 – Present

- Led a research project on AI-driven approaches to compliance, now under peer review; the findings became the basis for WendWay (below)

WendWay

West Lafayette, IN

Co-Founder & COO

June 2024 – October 2025

- Co-founded WendWay and served as COO, taking the compliance research above and turning it into a deployed writing-integrity product for higher education; also led backend development as the platform's main engineer
- Handled hiring, fundraising conversations, and partnerships, and made the day-to-day go-to-market calls in a small, early-stage team
- Piloted the platform with real universities and kept iterating based on feedback from instructors and students

Campus4Vets

West Lafayette, IN

Secretary, Interim Treasurer – Lead Forward Fellow

March 2025 – Present

- Managed the org's budget and secured a \$3,000 grant, then allocated it across programming connecting students with veterans

OTHER TECHNICAL PROJECTS

- Built a shared-memory architecture for multi-agent AI systems on a vector database
- Built a full-stack marketplace (React/Next.js/Docker) for publishing hands-on engineering challenges

SKILLS

Technical Skills: Python, Java, SQL, Git, Statistical Modeling (Cox PH, LASSO), LaTeX

Languages: English (Fluent), Hindi (Fluent), French (Very Basic / Learning)
